**Ashly Remote**

for Apple iPad®

## School & Sports Facilities

### What is Ashly Remote?

Designed specifically for iPad®, *Ashly Remote* is a free app used to design and deploy custom remote control interfaces over WiFi with *Net\*Work\*Able* Ashly amplifiers and processors. Leveraging iPad's intuitive touch-screen, consumers as well as industry pros love the ease of use and familiarity.

## Convention Centers

### Custom Remote Controls to Suit Your Install.

Each interface you design gives you custom control of your Ashly products all from one place. Add controls specific to your system by designing menu systems, faders, assign text labels, toggles, fixed presets, and much more! Navigation is simple—you don't need a tutorial to get started.

## Worship Spaces

### Choose from Various Control Functions

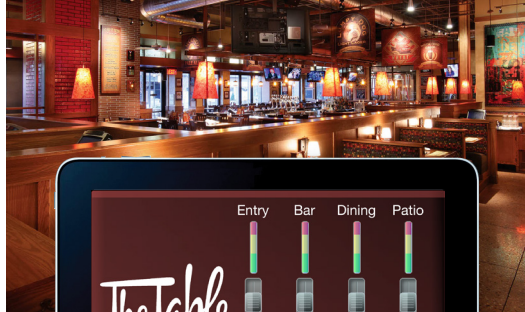

There are many functions available when creating a remote: gain/attenuation, preset recall, source selection, read-back labels, mute, logic output, meter, filter level control, amplifier standby, to name only a few.

## Performance Venues

**Create Your Own Library to Save Time.**

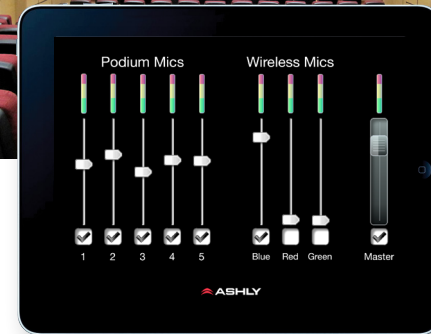

Ashly Remote allows you to import individual pages from previous designs to create new ones so you'll never need to create the same page twice. Store them and back them up for future use if you have projects in similar spaces.

## Restaurant & Retail

**Make It Unique to Your Client.**

Add visual elements to your interface like your client's logo, a background image or photo that fit a theme. File share a jpeg or png file via iTunes from your desktop or laptop, then Sync the iPad. The image will appear in Ashly Remote's library for placement within the remote interface.

## Business & Municipal

**Secure the Remote from Tampering.**

Once your client's remote is ready for use with the system, security features saved within your design lock out access—preventing further editing to the interface. Then hand over the controls to your client to manage their environment.
